

**If available, sewer connections are required under [Bella Vista City Ordinance 2009-03](#).**

If your property is currently connected to a septic system and sanitary sewer service is available, the property owner is responsible for connecting the service line to the provided tap-in point which will be installed in the utility easement around the property. This requirement applies only upon the sale or transfer of ownership of the property and must be completed within 90 days after the sale or transfer. The connection to the sewer service must be completed at the owner's expense (either the buyer, seller or a combination of both).
